Stardust - Terra Deleta: Game Budget

Zoud GameLab Financial Literacy Jam. Blanks marked ☐ are Eric's to fill in. Prices marked "est." are published list prices or typical market rates as of late 2026, to be confirmed before submitting.

1. Where the project stands

Already built and running: the Godot app (flight, true-scale solar system, debris fields, scanner, collecting and unloading, the live market and blueprint auctions, the Starship Library, the Starship Bank with savings, term deposits, loans and savings goals, the Desk ledger, cargo-space rental, the Maintenance Deck for smelting and building, the drafting room with blueprint review and COMMS) and the game server on Railway. The app and Inara's voice are in 13 languages, including Arabic and Hindi; 191 library books are already in Arabic. What it has cost so far is in section 2.

2. Spent to date (October 2026 to the jam)

Built by Eric with AI models as the development team, so most of the cost so far is time, subscriptions and usage.

Item	What it paid for	Spent
Eric's time	Design, story, direction, testing, every decision (about ☐ hours)	☐ (in-kind)
Anthropic Claude (plan and usage)	Code, game server, library books and tests, documents	☐
xAI Grok	Intro video clips and imagery	☐
ElevenLabs (Creator plan)	Inara's recorded voice in 12 languages, the intro narration	☐
Sarvam AI	Inara's Hindi voice	☐
Railway	Game server and database, hosting the voice files	☐
Twilio and Resend	Sign-in codes by text and email	☐
Domain and email	risesolutions-llc.com	☐
Apple developer account	iPhone testing (free Personal Team so far)	$0
Total spent		☐

3. Plan and phases (with a sponsor)

Phase	What's delivered	Time
1. Jam build	Phone build, career ladders and uniforms, library books for all five bars of every career, concept doc, video	to the jam deadline
2. Soft launch	iOS and Android in a few markets; art pass (ships, quarters, characters); onboarding tuned from playtests; analytics	months 1-4
3. Global launch	All stores; PC (Steam) and web; the remaining library books in Arabic, then the other languages; marketing push	months 5-9
4. Live operations	New careers, books and blueprints each season; community; balancing the economy from real play	months 10-12, then ongoing

4. What it takes to scale (12 months, estimates)

Estimates are typical market rates for a small independent studio in late 2026, as low-high ranges, to be confirmed with quotes. They assume a remote team and contractors rather than an office.

Category	Item	12 months (est.)
Team	Eric, founder and creative director	☐
Team	Senior game developer (Godot), full time	$90,000-$120,000
Team	Backend and infrastructure engineer, half time	$50,000-$70,000
Art	3D artist: ships, Starship interiors, quarters, characters (contract)	$40,000-$60,000
Art	UI and 2D artist (contract)	$25,000-$35,000
Audio	Music and sound design (contract)	$15,000-$25,000
Audio	Inara's recorded voice in every language (ElevenLabs, Sarvam)	$2,000-$5,000
Quality	QA and playtesting across ages, regions and devices	$20,000-$30,000
Community	Community manager, part time	$25,000-$35,000
Localization	The remaining library books in Arabic (about 1.7 million words) with native-speaker review	$50,000-$85,000
Localization	The app and books in further languages, in order of player demand	$20,000-$60,000

Category	Item	12 months (est.)
AI tools	Development and writing models (plans and usage)	$5,000-$25,000
Servers	Railway game server, database, backups and file delivery, growing with players	$5,000-$25,000
Sign-in	Text codes (about $0.05 each) and email	$2,000-$10,000
Stores	Apple ($99 a year), Google Play ($25 once), Steam ($100 per game)	about $250
Legal	Trademark clearance and filings (US, EU, UK, UAE); privacy and age review; contracts	$15,000-$40,000
Marketing	Trailer, store pages, streamers and creators, launch campaign	$40,000-$100,000
Contingency	About 10% for the unexpected	$40,000-$75,000
Total (12 months)		**about $445,000-$800,000, plus Eric's own line**

5. How sponsor funding would be used

In order of what moves the game furthest, fastest: 1. **People who multiply what's already built:** a senior Godot developer and a 3D artist, so the working systems get the look and polish of a top store game. 2. **Arabic first, done properly:** the remaining library books translated and reviewed by native speakers, for the UAE and Arab-region audience the jam serves. 3. **Playtesting with real players** of every age and background, so the money lessons land and the economy is fair. 4. **Launch:** store releases on phones, then PC and web, with a marketing push built around Inara and the story. 5. **Running costs** that grow with players: servers, sign-in, voice and AI tools.

6. Revenue model (for commercial potential)

☐ Eric to decide. Options that fit the game's rules (credits never come from real money, rule 2): a one-time purchase, or free to start with a paid full version. In-game credits are never sold.
